Career Objective

AI/ML Engineer with experience in Machine Learning, Deep Learning, NLP, and LLM-based applications using LangChain and RAG pipelines. Skilled in building scalable AI systems using Python, FastAPI, PyTorch, and vector databases.

Education

B.Tech - Artificial Intelligence & Data Science (Pursuing)

AISSMS Institute of Information Technology

12th M.K. Gandhi College, Vasmat: 75.33%

10th Kids' Kingdom Public School, Nanded: 84%

Technical Skills

Programming Languages: C, C++, Python, SQL

Artificial Intelligence & ML: Machine Learning, Deep Learning, Natural Language Processing (NLP)

LLM & AI Frameworks: Ollama, RAG, Local LLMs, LangChain, LangGraph, Model Context Protocol (MCP)

Databases & Data Tools: PostgreSQL, ChromaDB, SQLAlchemy, MongoDB

Development Tools: Git, GitHub, Docker, Streamlit

Frameworks & Libraries: FastAPI, Flask, PyTorch, MLOps

Projects

3D Virtual Try-On System (VTON) using SMPL-X

Aug 2025 - Ongoing

Developing a deep learning-based 3D Virtual Try-On system for realistic garment visualization on diverse body types. Training cloth simulation models using high-VRAM GPU in collaboration with IIT Madras.

Implementing parametric human body modeling (SMPL-X) for accurate body shape and pose estimation.

Designing an end-to-end garment fitting pipeline integrates physics-based cloth deformation.

Hospital Management System API (HIPAA Compliance)

Sep 2025– Nov 2025

Developed a RESTful API using FastAPI to manage hospital operations, including patient and doctor records with secure JWT-based admin authentication. Integrated a Machine Learning model to predict insurance premium categories based on user demographics and lifestyle data.

Tech: Python, FastAPI, PostgreSQL, SQLAlchemy, JWT, Streamlit, Scikit-learn, Pandas, NumPy

Resume Analyzer using LangChain

Dec 2025– Feb 2026

Built an AI-based resume analyzer that evaluates the ATS score, identifies skill gaps, and provides improvement suggestions for job roles using LLMs.

Tech: Python, LangChain, NLP, Ollama (local llms), Prompt Engineering

AI-Based Biometric Authentication System using Facial Recognition

March 2024 – April 2024

Improved a real-time computer vision system for automated identity verification using facial recognition techniques through webcam input. Curated self-made datasets to train the Machine Learning model.

Tech: Python, OpenCV, Face Recognition, Machine Learning

Achievements

- Solved 100+ problems from Striver's A2Z DSA sheet, demonstrating proficiency in core data structures and algorithmic problem solving
- Built 3+ end-to-end LLM-based applications using LangChain and Ollama
- Developed AI Resume Analyzer with ATS scoring and skill-gap detection

Certifications

- Anthropic Model Context Protocol: Advanced Topics, 2026 [View Certificate](#)
- AZ900: Microsoft Azure Fundamentals, 2026
- Google Data Analytics Professional Certificate, Coursera, 2025
